

March 2023

Dear Valued Supplier,

Leonardo UK Ltd. must ensure compliance with environmental laws and regulations. Regulations are constantly changing around the world requiring further product material information; EC 1907/2006 REACH, Waste Framework Directive 2008/98/EC (SCIP), 2011/65/EU and Addendum (EU) 2015/863) (RoHS), Biocide Regulation 528/2012, Persistent Organic Pollutants (POPS) Regulation 2019/1021 are just a few examples.

Leonardo has engaged S&P Global Engineering Solutions, a worldwide leader in technical content services, to assist them in collecting the latest environmental compliance updates for parts that you have previously provided environmental compliance information. The data is being gathered from valued suppliers and authorised distributors for components and materials, which Leonardo purchases or specifies in their product designs. The data provided will remain confidential if required.

Utilising FMDs allows Leonardo to better analyse regulatory changes.

Your company is an important supplier to Leonardo either directly or through sub-tier supply-chains and as such, we are seeking your cooperation in providing the requested information as quickly and completely as possible. The content data for your products is essential for Leonardo to determine the continued use of your products.

Please provide the requested information to S&P Global Engineering Solutions as quickly as possible, preferably within 2 weeks of this request.

Direct all clarification and/or technical questions regarding this request to the S&P Global contact indicated in the accompanying email.

We greatly appreciate your support and co-operation.

Sincerely,

Chris Lines
VP Procurement & Commercial, Compliance UK
Electronics Division
